

Percentage of Seniors Ages 60+ in each Area Agency Region who have been told by a Doctor that they have Osteoporosis within the past 5 Years

The data provided in this chart are drawn from the *AdvantAge Initiative 2008 Community Survey of Adults Aged 60 and Older*, conducted in 15 service areas and 5 supplemental areas in the state of Indiana - a stratified random digit dial (RDD) telephone survey of a representative sample of 4,969 non-institutional adults aged 60 and older, with sample sizes ranging from 300 to 303 for each Area Agency Region. Area 2 results are not reflected on the chart (including the counties of Elkhart, Kosciusko, LaPorte, Marshall and St. Joseph). The area was surveyed during a different time period (2005) for a different cohort (65+) and, therefore, results are not comparable. To view comprehensive survey results, visit www.agingindiana.org. The map was produced by Frank Marshalek (fmarshal@indiana.edu) using ArcGIS 9.2.
